

When Installation Issues Happen

Even with experienced crews and careful handling, unexpected problems can occur during installation.

- Stone may chip during transport.
- Edges can be damaged while fitting pieces into place.
- Seams sometimes need correction..
- Surface scratches or etching may appear during installation.

These issues can slow down your crew, delay project completion, and create unnecessary stress on the jobsite.

That's where **Beyond Stone Solutions** comes in.

We specialize in professional stone repair and restoration, helping fabricators resolve installation issues quickly and professionally.

Installation Repair for Stone Fabricators

Even the most skilled installers encounter unexpected issues during countertop installation — chipped edges, seam problems, scratches, etching, or surface damage.

Instead of pulling your installers away from the job to attempt difficult repairs, delegate those problems to the specialists at **Beyond Stone Solutions**.

Our certified stone restoration technicians repair and restore stone surfaces quickly and professionally so your crew can stay focused on what they do best — **fabricating and installing beautiful stone**.

We understand the importance of protecting your reputation with homeowners, designers, and builders.

When repairs are performed properly, most damage can be restored to a nearly invisible finish — allowing your project to stay on track.

Keep Your Installers Focused on Installing

Your installers are highly skilled professionals. Their time is best spent installing countertops, not troubleshooting complex repairs.

When damage occurs during installation, attempting repairs can:

- Slow down the job
- Increase labor costs
- Delay project completion
- Create frustration for your crew

Instead, bring in a restoration specialist.

Beyond Stone Solutions works alongside fabricators and installers to repair stone quickly and efficiently, allowing your team to stay productive and on schedule.

Don't Replace the Slab. Repair It.

Our technicians are trained to repair and restore a wide range of natural and engineered stone surfaces, including:

- Marble
- Granite
- Quartzite
- Engineered stone
- Limestone
- Travertine

We regularly assist fabricators with:

- Edge and corner chip repairs
- Seam corrections and blending
- Surface scratch removal
- Etch damage on marble and limestone
- Crack stabilization and repair
- Finish restoration and polishing
- Jobsite touch-ups before job completion

Many repairs can be completed on-site, helping avoid costly slab replacement and installation delays.
